ABSTRACT OF THE DISCLOSURE

A communication dealer terminal stores advertisement data and consumer's position data and taste data, selects advertisement data on the basis of the position data, taste data and time, and transmits the selected advertisement data to consumers. Each consumer terminal includes a means for transmitting the position data to the communication dealer terminal, a means for displaying received advertisement data, and a means for transmitting a reservation request of a goods or the like selected by the consumer from the advertisement data to the communication dealer terminal. A company terminal includes a means for transmitting advertisement data to the communication dealer terminal, and a means for accepting a reservation request via the communication dealer and executing a reservation process, a means for checking whether a consumer coming to shop has requested a reservation, and a means for selling a goods or the like. Thus it is possible to make a pin-point distribution advertisement data taking consumer's time, position and taste into considerations and lead consumer's purchase requests to advertisement offerer.
